

Description

The Xesar Wall Reader is an attractive, sleek and practical unit combining superior design with high-quality materials. It is designed to be used with the Xesar Wall Reader Control Unit and is suitable for controlling electronic locking components in all types of applications including sliding and swinging doors, lifts and turnstiles.

Adding an updater control unit to the Xesar wall reader makes it the central security interface within the Xesar virtual network, this means that identification media is limited to the configured validity period, up-to-date security information is imported and security updates are returned to the system.

The Xesar Wall Reader is IP65 rated so is suitable for use both indoors and outdoors and is supplied complete with all required seals, fixings, removal tools and assembly manual.

Weather Resistant
